

~~A1~~
Sub B1
1. (Amended) A composition comprising:
a base comprising as a principal component a moisturizer suitable for application to human skin; and
a plurality of abrasive particles having a particle size capable of abrading the skin.

2. The composition of claim 1, wherein the moisturizer comprises one of a liquid, a gel, and an emollient.

3. The composition of claim 1, wherein the abrasive particles comprise one of corundum and magnesium oxide.

A2
4. (Amended) The composition of claim 1, wherein the abrasive particles comprise corundum having an average particle size in the range of 50 microns to 240 microns.

Sub B2
5. (Amended) A composition comprising:
a base suitable for application to human skin; and
a plurality of corundum suspended in the base having an average particle size in the range of 50 microns to 556 microns.

6. The composition of claim 5, wherein the base comprises as a principal component a moisturizer.

Sub C1
A3
7. The composition of claim 5, further comprising at least one of a vitamin, a mineral, an antioxidant, a cleanser, and an emulsifier.

8. (Amended) An apparatus comprising:
a handle suitable for gripping by a human hand, the handle having a head portion; and
a porous applicator coupled to the head portion of the handle having dimensions suitable for contacting localized areas of human skin, the porous applicator having a surface property such that when applied to human skin in the

A3 presence of an exfoliating composition, the porous applicator manipulates the composition about the skin allowing the composition to abrade the epidermis.

9. The apparatus of claim 8, wherein the applicator comprises a sponge.

10. The apparatus of claim 9, wherein the applicator further comprises a cap comprising a surface and sidewalls defining an interior volume having dimensions corresponding to dimensions of the head portion of the handle with the sponge coupled to the surface of the cap.

A4 11. (Amended) An apparatus comprising:
a vibrator having an eccentrically moveable head; and
an applicator coupled to the head, the applicator comprising a sponge having dimensions suitable for contacting localized areas of human skin, the applicator having a surface property such that when applied to human skin in the presence of an exfoliating composition, the applicator manipulates the composition about the skin allowing the composition to abrade an epidermal layer of the human skin.

A5 13. (Amended) The apparatus of claim 11, wherein the applicator comprises a closed-cell sponge.

18. A method comprising:
applying a composition to an area of human skin, the composition comprising a base and a plurality of abrasive particles, the base comprising, as a principal component, a moisturizer; and
using a vibrator, manipulating the composition over the area of human skin.

19. The method of claim 18, wherein manipulating comprises causing a portion of the base to be absorbed by the area of the human skin.

20. The method of claim 19, further comprising, after manipulating, wiping off any unabsorbed portion of the composition.

Please add the following new claims:

- A6
21. (New) The composition of claim 1, wherein the composition may be left on the skin after application.
- Sub C'
22. (New) The composition of claim 1, wherein the plurality of abrasive particles are suspended in the moisturizer.
